

Hello.

Philipp J. Hummer Designer & Citizen Scientist

SPOTTERON PLATFORM

Since 4 years we develop the Citizen Science platform SPOTTERON

Currently over 18 projects are running on the platform

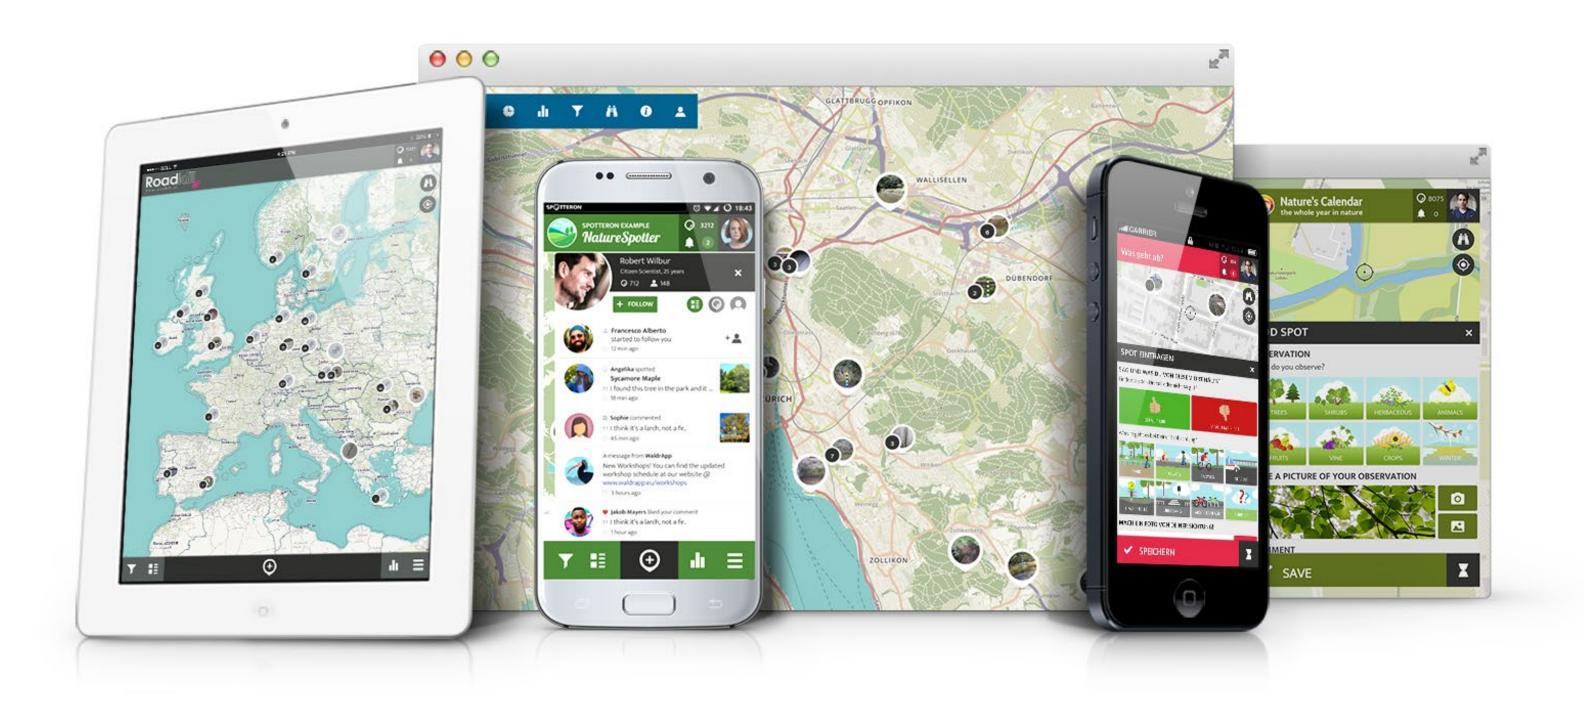

Core concept: shaping Citizen Science together

Why we do it - connecting people with science and their environment

Each project is individually tailored, no "one app for all"

modular concept: all extensions are available for all projects

Each project runs its own smartphone apps and interactive browser maps

Don't walk alone:
Support and updates
during the whole runtime

WHY SMARTPHONE APPS?

The tool in our pocket: "Swiss Knife" for participatory science

Always connected:
Smartphones represent direct communication

Reaching out while being close: Apps are easily available and can reach new groups

Reconnect the youth on eye-level: Especially younger generations can be included and excited by the use of devices

BASIC APP **EXPECTATIONS** IN 2018

FAST: Performance, Usability and Mobile First

NICE: High level of "Look & Feel" and interface design

SOCIAL: Social Citizen Science: Community features in apps

SECURE: Security, Privacy & GDPR (DSGVO) It is the responsibility of a project or platform to care for its user's security & privacy

FAST: PERFORMANCE, USABILITY & MOBILE FIRST

Performance:

Distributed server infrastructure

Usability:

Apps need device-oriented design for immersion, fast use and practical experience.

Mobile first:

Mobile devices are already the most important platform and connect us to the world.

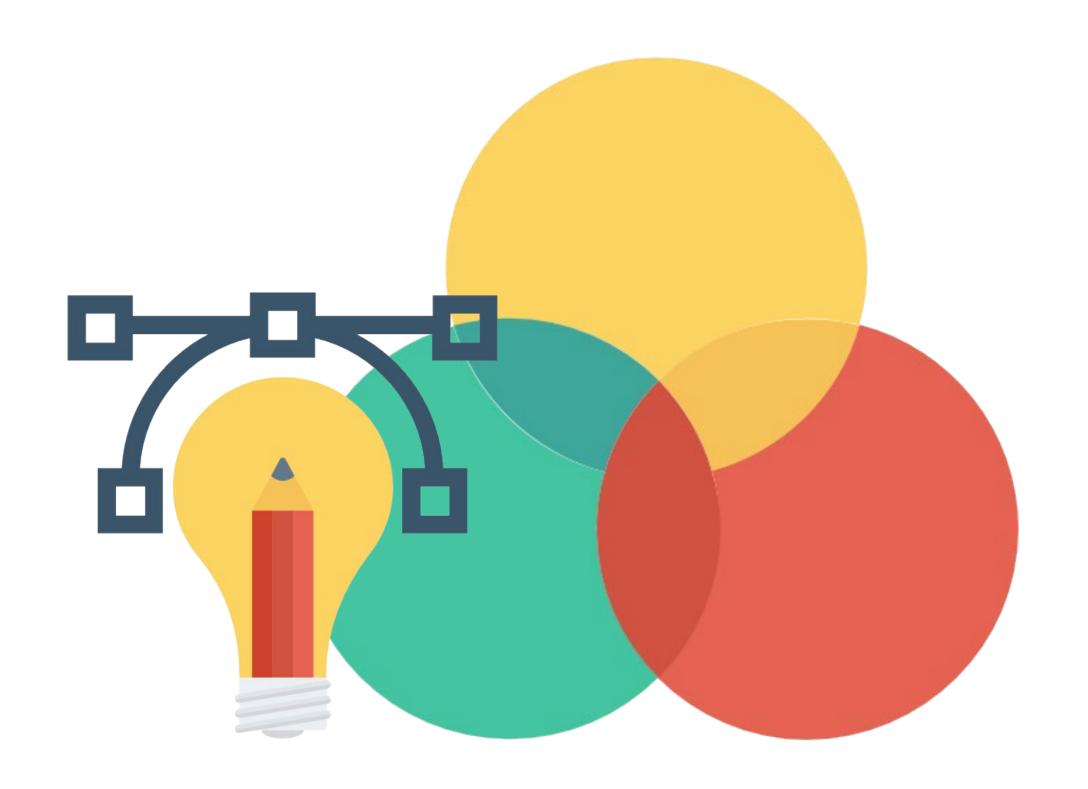

NICE: HIGH LEVEL OF "LOOK & FEEL" & INTERFACE DESIGN

Look & Feel

Layouts, interfaces & logos communicate stories, emotions and traits - it is important how an app looks

Interface Design:

Interactive tools need interfaces, which are guiding users, are optimized for devices offer structure and access to all features.

SOCIAL: SOCIAL CITIZEN SCIENCE & COMMUNITY FEATURES

What are Community Features?

Liking, commenting, following: User interaction is an important corner stone of interactive tools.

Social Citizen Science:

Citizen Science should not only be about data collection. With social features, Citizen Science tools can reach out, grow, foster long-term motivation and also data quality.

SOCIAL: SOCIAL CITIZEN SCIENCE & COMMUNITY FEATURES

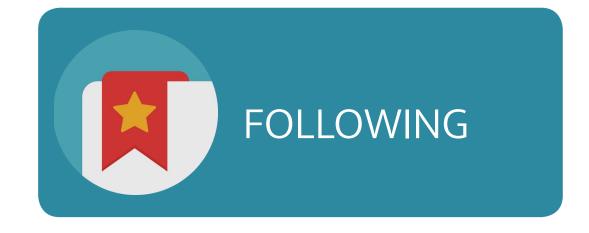

Examples of social features in modern interactive applications:

SECURE: SECURITY, PRIVACY & GDPR (DSGVO)

Security:

Encryption matters - all sensitive data traffic must be encrypted by SSL / TLS (https)

Privacy:

Citizen Science should use as less external scripts as possible & should not track users.

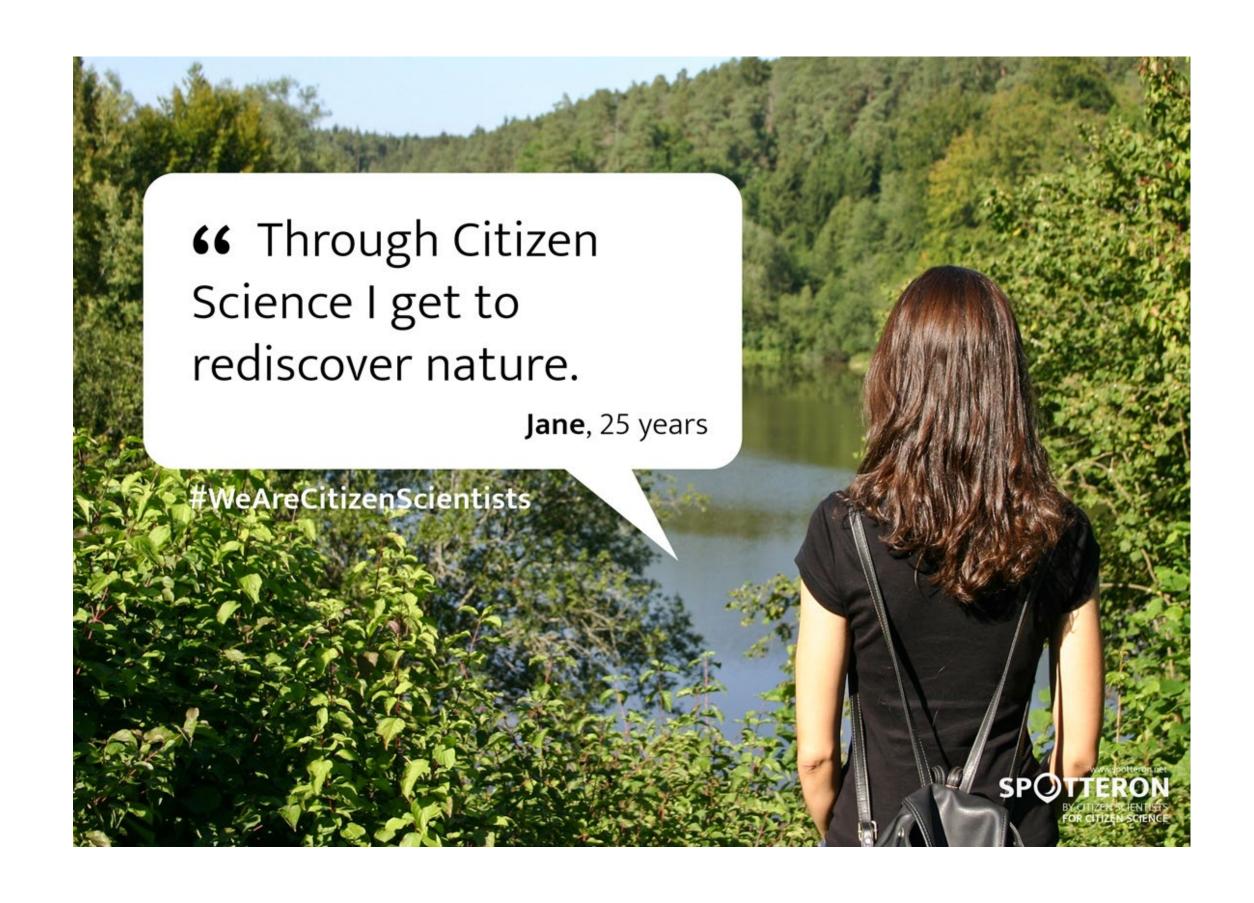

GDPR:

Consider data protection. Additionally personal data management options should be built directly inside the tools.

Nachricht von **Naturkalender**

Liebe NaturVerrückt BeobachterInnen! Ab nächster Woche startet das Nachfolgeprojekt "Naturkalender" mit neuen Features & Beobachtungen für die Winterzeit. Ihr könnt die neuen Apps für Android & IOS im Lauf der nächsten Woche auf https://www.naturkalender.at & auf Facebook finden.

Australian Brush-Turkeys The Australian Brush-turkey (Alectura lathami) is an endemic

Australian bird species from the Megapode family. Birds in the Megapode family are also known as mound-builders. Brush-turkeys occur naturally in rainforests and woodlands, where they forage by raking through leaf litter and soil for fruit, seeds, insects, lizards, and almost anything edible. Despite being poor fliers, they are capable runners and climbers. What sets them apart from other birds is their unique reproductive behaviour. Rather than incubating their eggs with their body heat, Brush-turkey males construct huge nest mounds out of soil and leaf litter, often weighing up to 3 tonnes. The breakdown and decomposition of this material produces heat that keeps the buried eggs around 33°C. Once the chicks hatch they are completely independent of their parents and are capable of forging
